```
#include <iostream>
using namespace std;

int main() {
    int stack[5];
    int top = -1;

    cout << "Enter 5 served customer token numbers:\n";
    for (int i = 0; i < 5; i++) {
        top++;                // Increment top index for the new element
        cin >> stack[top];    // Store user input into the stack
    }

    cout << "\n===== SERVICE HISTORY =====\n";
    while (top >= 0) {
        cout << "Token: " << stack[top] << endl;
        top--;                // Pop elements from the stack in LIFO order
    }

    return 0;
}
```
